

CALLUM BECKWITH

PERSONAL PROFILE:

I have a first-class bachelor's in Computer Science, and I'm very passionate about this industry. For the last couple of years, I have worked as a full-stack developer, where I have built and maintained data-heavy auditing software for internal and cloud environments. I am a strong influence within the development team, where I have made impactful decisions and encouraged their exploration of new technologies. During university, I ran a freelance web design and development partnership, where I built my knowledge around handling clients and online marketing. I am familiar with several programming languages and frameworks and can confidently familiarise myself with most languages. I am proficient with various development environments and have considerable experience in design software. My experience working alongside clients and in an agile development team has provided me with the organisational and time management skills to meet deadlines. Part of this experience includes being able to work effectively within a team and independently. Outside of the industry, my hospitality experience has prepared me to work efficiently during customer-oriented tasks.
